

reneW

Learning Expedition specialised
in renewable energy

Energy production has an impact on economic activities, the environment, and our quality of life. It's therefore not surprising to find that in the past few years, they have become more important in our society. Although Quebec has been privileged to be able to rely on hydroelectricity, other forms of renewable energy have emerged: biomass, wind energy and solar energy.

WHAT IS THE reneW PROGRAM?

It's a one-week immersion program in renewable energy management which will expose participants to the realities of this industry in a Canadian and global context.

Newly offered in a 100% distance learning format which allows participants to broaden their knowledge of renewable energy management while immersing themselves in the dynamic and collaborative world of HEC Montréal.

PROGRAM SUMMARY

Seminars: energy and commercialisation markets, project financing, renewable energy, regulations, and social acceptability.

Virtual meetings and exchanges in the form of conferences and testimonies with company leaders.

Certificate of attendance

One three-hour interactive session per day for 5 days.

One week for one group of 10 to 35 participants.

MONTREAL HIGHLIGHTS

Montreal is the headquarters for many large renewable energy companies such as Hydro-Quebec

Montreal is a leader in sustainable mobility and intelligent transport

Quebec has linked its cap-and-trade system for greenhouse emissions to California's, thus creating the largest carbon market in North America.

Quebec is a province where 99% of its electricity is produced from a renewable source.
